

ORTAS

Observer-Reported Toileting Abilities Survey

We are conducting a pilot study of our
ORTAS toileting survey!

WHAT A 30-minute online survey consisting of questions about a person's diagnosis, symptoms, treatments, and ability to toilet independently, or not. Any level of ability is welcomed to participate.

WHY Toileting abilities are reported by families to be one of the most important aspects of daily living affected by neurodevelopmental disorders. This pilot study is for the purpose of testing a survey which will measure toileting abilities as an outcome measure.

WHO We need a total of **200 participants** to be **beta testers** of this survey, including people with neurogenetic disorders and their siblings! We need:

- Caregivers of a person (of any age) with a NDD
- Caregivers of neurotypical children (ages 1-6) as controls
- Adults with a neurodevelopmental disorder (NDD)

HOW If you are interested in helping to test this survey, please email ORTAS@combinedbrain.org or visit www.COMBINEDBrain.org for more information.

*What's the hand motion in our logo? This is the ASL sign for the "restroom!"
